Areas of Intervention

Healthcare, Economic Growth and School Education

In Punjab, despite aligning with national health coverage, the healthcare sector faces persistent challenges due to rapid population growth, financial barriers, cultural nuances, and societal issues. Whereas ensuring equitable education access remains a critical challenge, impacting around 5.35 million children ages 5-14, with disparities rooted in gender and socio-economic factors.

The most affected districts of Punjab include Bahawalpur, Dera Ghazi Khan, and Multan. These areas hold 82% of Punjab's population but face severe development challenges, including experiencing higher poverty rates, lower literacy, and more out-of-school children than the rest of the province. Multi-dimensional poverty is 2.1 times higher, literacy is 10% lower, and out-of-school children are 2.2 times more prevalent in these regions of Punjab. Youth unemployment also varies widely, with rates ranging from 4.45% to 17.78% across districts in the province. Therefore, Punjab needs policy realignment for improved education access, enhanced healthcare services, and economic inclusion.
